Ocaudio user manual pdf.

Below are a series of instructions that will benefit your modification and production. If you have any questions, do not hesitate to contact us via email to [ubcstudios.ok@ubc.ca](mailto:ubcstudios.ok@ubc.ca). Start ocaudio. Click on the ocaudio icon in the application bar. Create new project. File> New. Select the microphone. Even if the Podcast microphone (Blue Iceicle) should be selected by default, you can confirm or select a different microphone by checking> Recording Mixer> Conference and make a selection. Register. Click the red circle icon in the upper left corner. Choose the frequency of the sample and the channels that best adapt to your project. The standard sample frequency, 44.1 (or 44100) is used for most consumption audio, while 48 kHz is often used in a more professional context such as the video. A highest bit depth allows you to have more space before distortions or clipping occur. Stop registering. Click the pause or stop button. If you want to change your audio, highlight the section that requires the modification and applies the desired effects using the tools. Save on your device. At the end of the project, click File> Save and choose the desired format and the file position. Once the computer studio is disconnected, the files are deleted from the units. Make sure to save on an external or cloud unity. Do you still have problems? Do not hesitate to contact us at [ubcstudios.ok@ubc.ca](mailto:ubcstudios.ok@ubc.ca).
